DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to a system for accessing encrypted broadcast data using a decryption key stored in memory, classified in class 713, subclass 193, subject matter wherein unauthorized access to information held in static memory elements is prevented.
 - II. Claim 13, drawn to a CPU accessing confidential data wherein the confidential data is written to one of a plurality of storage regions on a storage device, classified in class 713, subclass 200, subject matter further including means or steps for increasing a system's extension of protection of system hardware, software, or data from maliciously caused destruction, unauthorized modification, or unauthorized disclosure to or by an end user.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I. and II. are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has the utility of initializing a CPU after certain confidential data has been read, encrypting and decrypting data, connecting a CPU to a memory device by both a bus and a serial link, and receiving and accessing encrypted broadcast data, while invention II has separate utility such as caching confidential data in one of a plurality of storage regions of a storage device when a CPU requests access to the data. See MPEP § 806.05(d).

Art Unit: 2131

3. As such, Group I requires searching in class 713/1, subject matter comprising means or steps for establishing an original operating parameter or data for a computer or digital data processing system, 713/502, subject matter wherein counting is performs matter which prevents rerecording of a stored picture signal representative of a time varying object or image, and 380/264, subject matter wherein the key is extracted from a static storage device having a specified location designation. Group II. does not require searching in those classes, but does require searching in class 711/118, subject matter wherein portions of the data stored in slower main memory are transferred to faster memory between processor(s) and the main memory, and class 711/123, subject matter further comprising means or steps for employing separate or partitioned cache(s) for separately storing portions of instruction data and user data, respectively.

- 4. Because these inventions are distinct for the reasons given above, and have acquired a separate status in the art as shown by their different classification, and as discussed in the previous paragraph, the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
- Applicant is advised that the reply to this requirement to be complete must include an 5. election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
